1971	68
1972	79

This graph [table] shows a gradual decrease in the number of fatal farm accidents in Wisconsin through 1953. Since then, there has been a leveling off to a point considerably lower than the average for that early period. Indications are that the permanent injury and lost-time accidents have shown a corresponding decrease.

A further reduction in farm accident is the goal. However, a continuing active safety program in which all segments of agriculture participate is necessary to even maintain the present level of farm accident fatalities.

The ultimate goal of agriculture should be to further reduce the number of unnecessary accidents to the point where we compare favorably with other industries.

1972

Wisconsin Fatal Farm Accident Summary

Yearly summaries of fatal farm accidents are based on newspaper clippings from all Wisconsin daily and weekly newspapers, with further verification and details obtained from agricultural teachers, county agents, and other similar sources. In addition, there are hundreds of permanent-injury and thousands of lost-time accidents each year.

Individual county statistics will be made available upon request to those promoting community or county-wide safety programs.

Total	Type of Accident	January	February	March	April	May	June	July	August	September	October	November	December
